PROFILE

I am a polyglot programming enthusiast and a developer. I have done work which ranges from GPGPU programming to voice based virtual assistant. I prefer to have a general idea of various fields but I specialize in concurrency and FRP paradigm, with my strongest language being Scala, JS and Haskell.

Along with that I take keen interest in web backend and have a good amount of understanding of NodeJS.

Check out my blog and github to get a better idea of my experience with various languages.

EXPERIENCE

ANDROID DEVELOPER

LEAF WEARABLES | AUG 2014 - MAR 2015

- Developed the android app and built an offline navigation system which relied on google maps and SMS.
